

## Replication Materials

Four data sets (in Stata format) and three Stata do-files are provided.

**dofile\_fertility** runs the regressions corresponding to the fertility effects (both conceptions and abortions), reported in table 2 of the paper. It uses the data sets labelled **data\_births** and **data\_abortions** (see reference list for the detailed sources of the data).

**dofile\_hbs** runs the regressions corresponding to the expenditure results, reported in tables 4 and 6 of the paper. It uses the data set labelled **data\_hbs** (Household Budget Survey -Encuesta de Presupuestos Familiares- of 2008 for the relevant subpopulation, see reference list).

**dofile\_lfs** runs the maternal labor supply regressions, reported in table 5 of the paper. It uses the data set labelled **data\_lfs**, which is a data set that merges the Spanish Labor Force Survey (Encuesta de Población Activa, see reference list for details) for the four quarters of 2008 and the relevant subpopulation.
